Profile

Master's student interested in language technology.

Education

University of Helsinki Helsinki, Finland

Master's studies in Language Technology 2026–Present

Relevant studies include natural language processing, command-line tools, statistics, and machine learning.

Technical Skills

Programming — Python, Bash, basic R

Natural Language Processing — Text preprocessing, regular expressions, corpus processing, basic NLP models

Data Analysis — Python, R, basic statistical analysis

Git — Git, GitHub, branches, commits, merge, push and pull

Unix/Linux — Command-line navigation, file management, text processing, SSH and shell scripting

Projects

Command-Line Tools Project

Practiced Unix and Linux command-line tools for file management and text processing. Used commands such as `grep`, `sed`, `sort`, `uniq`, `tr`, and `wc`. Also practiced Bash scripting, SSH, Git, GitHub, and GitHub Pages.

Natural Language Processing Coursework

Worked with basic NLP concepts such as tokenization, language models, part-of-speech tagging, text classification, and corpus analysis.

Core Competencies

Problem-solving — Able to break technical problems into smaller steps and find practical solutions.

Communication — Experience communicating in multilingual study and work environments.

Learning — Interested in continuously developing technical, programming, and language technology skills.

Teamwork — Comfortable working independently as well as collaborating with others on coursework and projects.

Languages

- Chinese — Native
- English — Working proficiency
- Finnish — Intermediate
